

Object-Action Grammar Order**Action-Object Grammar Order****Which is “best”? Why?**

Object-action grammar order is the best choice because it offers a more user-friendly interface. Most Windows applications use object-action grammar order making it a recognizable method for processing commands. With object-action order, users first select the object they want to work with and then choose an action, which simplifies the process and reduces the likelihood of errors. The object-action order is easier to use and involves less decision complexity compared to action-object grammar.
